Double Degree Programme in Engineering and Business Administration/Management

A new double degree programme in Engineering and Business will be offered from Academic Year 2006/2007. This programme is a specialized degree programme that combines two disciplines that have significant synergistic benefits. It is designed to develop the core engineering skills of students so that they would fulfill the requisite professional requirements of their chosen engineering fields. At the same time, the programme will equip the students with the necessary business skills and knowledge in the areas of organizational behavior, finance and accounting, marketing, economics, and business law, among others, in order to be successful in the business world. This combination of engineering and business skills will produce a new breed of business-savvy engineers for the marketplace.

Three options will be offered to students, namely:

(a) BEng(Hons)/BBA
(b) BEng(Hons)/BBA(Hons)
(c) BEng(Hons)/MSc(Mgt)

Compared to the BBA and BBA(Hons), the Master of Science in Management, MSc(Mgt), would be taken by better Engineering students with a bent for some research-type modules at a higher level. Students may complete the double degree programme within 4 to 5 years.

Admission into the programme will be through:

1. direct application by students with relevant “A”-level or equivalent qualifications

    OR

2. application by students in the BEng or BBA programme during their first or second year of study.

The applicants will also need to meet the minimum prevailing admission criteria of both Faculty of Engineering and School of Business. The applicants must have:

- ‘A’ Level Mathematics, and
- ‘A’ Level Physics or 'A' Level Chemistry**

**Students without A'level Physics need to have 'O' level or equivalent in Physics and will be required to take specified Physics bridging modules.
